

WHAT WOULD
YOU DO WITH
50%
MORE FULL
PALLET?
STORAGE!

Keep your warehouse positioned for growth with BeerStor™

The BeerStor™ Solution: **STACK IT** In Your Favor!

Finally, a solution that solves your pallet storage problems without expensive expansions or Greenfield construction!

Kuecker Logistics Group has developed BeerStor™, a racked pallet storage system that uses the right blend of proven technology to maximize pallet storage while providing significant efficiencies in your warehouse. BeerStor™ is different from other rack storage systems because it can grow into and be compatible with any components added in the future. Want to start purely with storage to keep costs down? Need to add VoicePick or a WMS later? Do you want to incorporate a shuffling and picking component at a later date? All of these components can easily be added later, giving your warehouse a growth path for the future without the worry of having to replace what you have already invested in. BeerStor™ from KLG has assembled the most reliable and cost effective technologies in the world to provide beer wholesalers the reliability, flexibility and certainty they require in the increasingly changing beverage world.

Position Your Distributorship for the Future While Substantially Increasing Profits!

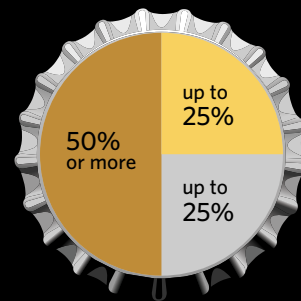

- 50% or more pallet storage in your existing space. No costly additions.
- Scalable from 1.5 to 15 million cases a year.
- Return On Investment in 3-5 years! A new expansion won't get you that.
- Touch 70-80% of your pallets once! Eliminates the need for time consuming/unproductive shuffling of pallets. NO restocking pick locations for your top moving SKUs. NO rotating bulk storage to create lanes or keep up with date codes.
- Significantly lower labor costs with increased accuracy. Control Inventory!
- Millions less than other Automated Systems!

"BeerStor™ changed the whole dynamic of our wholesale warehouse business. Partnering with KLG has been a game changer for us."

- Sheldon Hart, Eagle Distributing of Shreveport, Warehouse Supervisor

- Storage
- Efficiency
- Labor
